                                              available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TH genes Gene prediction was based on a Hidden Markov Model of TH genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note="Rvi566c, (MTCY336.37), len: 230. Function: unknown probably exported has QQAPV repeats at C-terminus, similar to hypothetical M. leprae protein, to putative invasins 1,2(007390, 007391) from M. avium and slightly similar to C-terminus of Listeria invasion-associated protein p60 precursor P60_LISMO P21171. Gene prediction was based on a Hidden Markov Model of TB genes Gene prediction was based on a Hidden Markov Model of TB genes of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C ACMIONS: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome codon). If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /traislation="msylagamoigoywvgaplvigwtroyrrarwegragliopwr

Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markow Model of TB genes implemented in TBparse (kroyh) supplemented with visual inspection of positional base preference in endowing specially where there is an interease in the observed/expected third position of 4C an interease in the observed/expected the correct initiation codon. Where possible we choose an initiation codon (algorithms) give sequence (optimally 5-13bp before the initiation codon planding site sequence (optimally 5-13bp before the initiation codon in it this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CBIO 15A Unite de Genetique Moleculaire Bacterienne, Institut pasteur, 28 rue du Docteur Roux, 75724 paris Cedex 15, France E-mail: parkhill@sanger.ac.uk on Jun 27, 1998 this sequence version replaced gi:2104370.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            probable precursor of serine protease. Has putative signal peptideat N-terminus and hydrophobic stretch at C-terminus. Contains three signatures typical of subtilase family: aspartic acid active site (PS00136), histidine active site (PS00137), serine active site (PS00138). FASTA results: 053863 SERINEPROTEASE (1990 aa) pot: 241; E(): 8e-07; (38.0% identity in387 aa overlap), similar to MTCY15F10.29 (45.7% identity in 451 aa overlap)"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gt, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /product="hypothetical protein Rv3448"

                                                                                                                                                                                                                                                                                                                 probable precured of serine protease. Has putative signal peptideat N-terminus and hydrophobic stretch at C-terminus. Contains three signatures typical of subtilase family: aspartic acid active site (PSO0136), histidine active site (PSO0137), serine active site (PSO0138). FASTA results: 963863 sERINEPROTEASE (390 aa) opt.: 241; E(): He-07; (38.0% identity in387 aa overlap), similar to MTCY15F10.29 (45.7% identity in 451 aa overlap)"

Mycobacterlum bovis
Bacteria; Firmicutes; Actinobacteria; Actinobacteridae;
Bacteria; Firmicutes; Actinobacteria; Mycobacteriaceae;
Actinomycetales; Corynebacterineae; Mycobacteriaceae;
Mycobacterium; Mycobacterium tuberculosis complex.

(bases 1 to 1604)
Mahairas, G.G., Sabo, P.J., Hickey, M.J., Singh, D.C. and Stover, C.K.
Molecular analysis of genetic differences between Mycobacterium
bovis BCG and virulent M. Dovis
J. Bacteriol. 178 (5), 1274-1282 (1996)

Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TD genes implemented in TDparse (krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (aug. gtg. or Ltg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note="Rv1565c, (MTCY336.38), len: 729. Direct Submission

**Luberculosis sequencing and mapping teams, Sanger Centre, Wellcome Luberculosis sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 15A Unite de Genetique 75724 Paris Cedex 15, France E-mail: parkhill@sanger ac.uk

**Moleculaire Bacterlenne, Institut Pasteur, 28 rue du Docteur Roux, On Jun 27, 1998 this sequence version replaced gi:1405752.

**Notes:**

**Details of M. Luberculosis sequencing at the Sanger Centre are available on the World Wide Web.

**Details of M. Luberculosis sequencing at the Sanger Centre are available on the World Wide Web.

**CHRL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers.

**Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base predictence in codons, sepecially where there is an increase in the observed/expected third position G + C.

**ANTION:** In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg., gtg., or ttg) which is preceded by an upstream ribosome codon). If this cannot be identified we choose the most upstream initiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /codon_start_!

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            pacteria; Firmicutes; Actinobacteria; Actinobacteridae;
